AIMAAN KHAN

San Jose, CA | aimaanjkhaan@gmail.com | LinkedIn | GitHub | Portfolio

SUMMARY

M.S. Applied Data Intelligence student at SJSU with a B.E. in Computer Engineering (Honors in Cyber Security), three internships across ML, security and software, and two published papers. I build machine-learning systems end to end - from data and models to apps and tests.

EDUCATION

San José State University — **Aug 2026 - Present**
Master of Science, Applied Data Intelligence — *San Jose, CA*
Coursework: Python Programming & Data Structures (DATA 200), Database Technologies (DATA 201)

University of Mumbai — **2021 - 2025**
B.E. Computer Engineering, Honors in Cyber Security | *GPA 3.37 / 4.0 (WES; 7.79 / 10)* — *Mumbai, India*

SKILLS

Languages: Python, SQL, JavaScript, Java, C++
ML & Data: scikit-learn, pandas, NumPy, NLP (spaCy, TF-IDF), matplotlib, Jupyter
Web & Backend: Node.js, Express, Flask, FastAPI, MongoDB, REST APIs
Tools & Cloud: Git, Linux, pytest, AWS, Raspberry Pi, ESP32 | **Spoken:** English, Hindi

EXPERIENCE

Python Developer Intern - BeamOptics Scientific Pvt. Ltd. — **Jul 2025 - Oct 2025**
- Built the complete software stack for an automated Methylene Blue Reduction Test (MBRT) milk-quality machine on Raspberry Pi 4 - sensor integration, backend logic and a Kivy touch UI.
- Developed a statistical model on real-time light-sensor data that estimates the MBRT result before the test completes.
- Owned lab testing, debugging and deployment through to a ready-to-deploy machine.

Software Developer Intern - cloudyBoss Pty Ltd — **Aug 2023 - Jun 2024**
- Trained endpoint detection and response (EDR) models on STIX-compliant threat signals to automate threat detection.
- Designed a universal data denormalization module in SQL that turns federated relational data into ML-ready tables.
- Contributed ML components to the ANIMA AI security engine; earned cBX84 accreditation in machine learning and solution design.

Web Developer Intern - Prism Cybersoft Pvt. Ltd. — **Jun 2024 - Jul 2024**
- Built a responsive documentation website for SOHAM software using JavaScript and the MERN stack.
- Restructured navigation and page layouts to improve accessibility and cross-browser performance on all devices.

PROJECTS

Cyber-Attack Detection | *Python, scikit-learn, pandas, Streamlit, pytest*
- Built Random Forest models on 82K UNSW-NB15 network flows: 97.6% accuracy and 0.997 ROC-AUC for attack detection, plus 10-class attack categorization.
- Found and removed label leakage that inflated the original model to a false 100%; shipped saved pipelines, a CLI, a Streamlit app and a pytest suite.

Toxic Comment Detector | *Python, scikit-learn, NLP, Flask*
- Built a multi-label classifier for 6 toxicity types on 159K comments (TF-IDF word + character n-grams, Logistic Regression): 0.978 mean ROC-AUC on 64K unseen test comments.

AI Timetable Scheduler | *Node.js, Express, MongoDB, FastAPI, spaCy*
- Built a constraint-based scheduler that generates clash-free timetables for a whole department, with global teacher and room conflict checks and Excel export.
- Trained a custom spaCy NER model so staff can edit timetables in plain English; published in JETIR as first author.

LEADERSHIP & VOLUNTEERING

Adobe Student Ambassador - Adobe Express — Sep 2026 - Present
Volunteer - DevFest Bay Area 2026 (Google Developer Groups) — Oct 2026
Volunteer Event Staff - Mumbai Comic Con — 2023, 2025, 2026
