AIMAAN KHAN

San Jose, CA | aimaanjkhaan@gmail.com | LinkedIn | GitHub | Portfolio

SUMMARY

Cybersecurity-focused data student: B.E. in Computer Engineering with Honors in Cyber Security, now an M.S. Applied Data Intelligence student at SJSU. Hands-on with threat detection - EDR models on STIX threat signals in industry and a 97.6%-accurate intrusion detection system.

EDUCATION

San José State University **Aug 2026 - Present**
Master of Science, Applied Data Intelligence *San Jose, CA*
Coursework: Python Programming & Data Structures (DATA 200), Database Technologies (DATA 201)

University of Mumbai **2021 - 2025**
B.E. Computer Engineering, Honors in Cyber Security | GPA 3.37 / 4.0 (WES; 7.79 / 10) *Mumbai, India*

SKILLS

Security: Threat detection, intrusion detection, EDR, STIX threat intelligence, network traffic analysis, secure coding
Analysis: Python, SQL, pandas, scikit-learn, log and flow data analysis
Systems: Linux, networking fundamentals, Git, AWS **|** **Spoken:** English, Hindi

EXPERIENCE

Software Developer Intern - cloudyBoss Pty Ltd **Aug 2023 - Jun 2024**
- Trained endpoint detection and response (EDR) models on STIX-compliant threat signals to automate threat detection.
- Contributed ML components to the ANIMA AI security engine; earned cBX84 accreditation in machine learning and solution design.
- Designed a universal data denormalization module in SQL that turns federated relational data into ML-ready tables.

Python Developer Intern - BeamOptics Scientific Pvt. Ltd. **Jul 2025 - Oct 2025**
- Built the complete software stack for an automated Methylene Blue Reduction Test (MBRT) milk-quality machine on Raspberry Pi 4 - sensor integration, backend logic and a Kivy touch UI.
- Owned lab testing, debugging and deployment through to a ready-to-deploy machine.

Web Developer Intern - Prism Cybersoft Pvt. Ltd. **Jun 2024 - Jul 2024**
- Built a responsive documentation website for SOHAM software using JavaScript and the MERN stack.

PROJECTS

Cyber-Attack Detection | *Python, scikit-learn, pandas, Streamlit, pytest*
- Built Random Forest models on 82K UNSW-NB15 network flows: 97.6% accuracy and 0.997 ROC-AUC for attack detection, plus 10-class attack categorization.
- Analyzed which traffic features signal attacks (connection counts, bytes sent, TTL) to make detections explainable to analysts.
- Found and removed label leakage that inflated the original model to a false 100%; shipped saved pipelines, a CLI, a Streamlit app and a pytest suite.

Toxic Comment Detector | *Python, scikit-learn, NLP, Flask*
- Built a multi-label classifier for 6 toxicity types on 159K comments (TF-IDF word + character n-grams, Logistic Regression): 0.978 mean ROC-AUC on 64K unseen test comments.
- Served it through a Flask web app and JSON API with request limits and XSS-safe rendering.

SmartTracker IoT | *ESP32, C++, GPS, MPU6050*
- Built an ESP32 vehicle tracker that streams live GPS location and speed to a mobile app and alerts on sudden braking and rollover-level tilt; published in JETIR.

LEADERSHIP & VOLUNTEERING

Team Lead - two academic ML/software projects 2023 - 2025
Volunteer - DevFest Bay Area 2026 (Google Developer Groups) Oct 2026
