AIMAAN KHAN

San Jose, CA | aimaanjkhaan@gmail.com | LinkedIn | GitHub | Portfolio

SUMMARY

Software developer and M.S. Applied Data Intelligence student at SJSU. I build complete products - APIs, web apps, databases and the tests that keep them working - across Node.js, Python and Java, with three internships and two published papers.

EDUCATION

San José State University **Aug 2026 - Present**
Master of Science, Applied Data Intelligence *San Jose, CA*
Coursework: Python Programming & Data Structures (DATA 200), Database Technologies (DATA 201)

University of Mumbai **2021 - 2025**
B.E. Computer Engineering, Honors in Cyber Security | *GPA 3.37 / 4.0 (WES; 7.79 / 10)* *Mumbai, India*

SKILLS

Languages: Python, JavaScript, Java, SQL, C++
Backend & Web: Node.js, Express, Flask, FastAPI, REST APIs, EJS, HTML/CSS
Data: MongoDB, SQL databases, schema design, pandas
Practices & Tools: Git, pytest, input validation, secure coding, Linux, Raspberry Pi | **Spoken:** English, Hindi

EXPERIENCE

Python Developer Intern - BeamOptics Scientific Pvt. Ltd. **Jul 2025 - Oct 2025**
- Built the complete software stack for an automated Methylene Blue Reduction Test (MBRT) milk-quality machine on Raspberry Pi 4 - sensor integration, backend logic and a Kivy touch UI.
- Automated data capture and live visualization of sensor readings in Python, making test runs consistent and easier to analyze.
- Owned lab testing, debugging and deployment through to a ready-to-deploy machine.

Web Developer Intern - Prism Cybersoft Pvt. Ltd. **Jun 2024 - Jul 2024**
- Built a responsive documentation website for SOHAM software using JavaScript and the MERN stack.
- Restructured navigation and page layouts to improve accessibility and cross-browser performance on all devices.

Software Developer Intern - cloudyBoss Pty Ltd **Aug 2023 - Jun 2024**
- Designed a universal data denormalization module in SQL that turns federated relational data into ML-ready tables.
- Trained endpoint detection and response (EDR) models on STIX-compliant threat signals to automate threat detection.

PROJECTS

AI Timetable Scheduler | *Node.js, Express, MongoDB, FastAPI, spaCy*
- Built a constraint-based scheduler that generates clash-free timetables for a whole department, with global teacher and room conflict checks and Excel export.
- Trained a custom spaCy NER model so staff can edit timetables in plain English; published in JETIR as first author.

Inventory Management System | *Node.js, Express, MongoDB, EJS*
- Built a web app for a small business (AK Global) covering stock, packaging, invoices and e-commerce orders, with PDF shipping labels and Excel profit reports.

Toxic Comment Detector | *Python, scikit-learn, NLP, Flask*
- Served it through a Flask web app and JSON API with request limits and XSS-safe rendering.
- Built a multi-label classifier for 6 toxicity types on 159K comments (TF-IDF word + character n-grams, Logistic Regression): 0.978 mean ROC-AUC on 64K unseen test comments.

Cyber-Attack Detection | *Python, scikit-learn, pandas, Streamlit, pytest*
- Found and removed label leakage that inflated the original model to a false 100%; shipped saved pipelines, a CLI, a Streamlit app and a pytest suite.

LEADERSHIP & VOLUNTEERING

Team Lead - two academic ML/software projects 2023 - 2025
Volunteer - DevFest Bay Area 2026 (Google Developer Groups) Oct 2026

CERTIFICATIONS

Johns Hopkins HTML, CSS & JavaScript for Web Developers · AWS Academy Cloud Foundations · Flipkart GRiD 6.0 (Software Development)
